DKI Jakarta, Jakarta Timur | +6285187870867 | razcelfernandes25@gmail.com | [LinkedIn](#)

Summary

Information Systems graduate with a strong interest in IT, data analytics, and technology-driven problem solving. Experienced in developing data-driven applications and analytical solutions using Python, Pandas, Scikit-learn, Streamlit, and Microsoft Excel. Hands-on experience in machine learning, data processing, visualization, dashboard development, and system prototyping through academic and thesis projects. Analytical, detail-oriented, adaptable, and eager to contribute to technology transformation in the banking industry.

Education

Gunadarma University – Jakarta

2022-2026

S1 Information Systems

GPA : 3.53/4.00

Project Experience

Diabetes Prediction Application Using Support Vector Machine

Academic Project

Apr – Sept 2025

Python, Pandas, Scikit-learn, Streamlit, Matplotlib, Seaborn.

- Developed a machine learning application to predict diabetes risk using the Support Vector Machine algorithm.
- Processed and analyzed patient health data, including glucose levels, blood pressure, insulin, BMI, age, and family history.
- Performed data preprocessing, feature standardization, exploratory data analysis, and model training using Python.
- Evaluated the model using accuracy, precision, recall, F1-score, and confusion matrix.
- Created data visualizations, including glucose distribution, feature correlation heatmap, and prediction probability gauge.
- Built an interactive Streamlit dashboard for entering patient data and displaying diabetes prediction results.

Business Intelligence and Data Analysis

LSP Competency Test

May – June 2026

Python, Pandas, Matplotlib, Seaborn, Microsoft Excel

- Defined and prepared data objects for the business intelligence analysis process.
- Cleaned and processed datasets by handling missing values, duplicate records, and inconsistent data.
- Conducted exploratory data analysis to identify patterns, trends, and relationships within the data.
- Created charts, statistical summaries, and data visualizations to communicate analytical findings.
- Compiled a structured analysis report containing findings, insights, and data-based recommendations.

Comparative Analysis of Support Vector Machine and Random Forest for Diabetes Prediction

Undergraduate Thesis Project

August 2026

Python, Pandas, Scikit-learn, Streamlit, Matplotlib, Seaborn

- Developed a machine learning-based application for diabetes risk prediction using Python and Scikit-learn.
- Compared Support Vector Machine and Random Forest classification models using accuracy, precision, recall, F1-score, confusion matrix, and ROC-AUC.
- Performed data preprocessing, exploratory data analysis, feature analysis, and model evaluation on patient datasets.
- Achieved 98.07% accuracy using Support Vector Machine compared with 86.12% using Random Forest.
- Developed an interactive Streamlit application for patient prediction, model evaluation, and prediction history.

Certification & Training

- Creating Business Intelligence [View Credential](#)
- Fundamental Web Programming [View Credential](#)
- JavaScript Programming Language Fundamentals [View Credential](#)
- Intro Data Analyst [View Credential](#)
- Results Toefl [View Credential](#)

Skills

Technical Skills

- Programming & Data: Python, Pandas, Scikit-learn
- Data Visualization: Power BI, Matplotlib, Seaborn
- Application & Dashboard: Streamlit
- Tools: Microsoft Excel, Figma

Soft Skills

- Detail-oriented and accurate
- Effective communication and teamwork
- Quick learner and adaptable
